Website Design: *Hotel Room Reservation and Management System*

Description:

Design a website for reserving hotel rooms, checking availability, viewing amenities, and managing bookings. Users should be able to book rooms, view details, and manage reservations.

Requirements

1. **Technologies:** HTML, CSS, Bootstrap, JavaScript
 2. **Pages and Layout**
 - **Home:** Introduction to the hotel and featured rooms.
 - **Rooms:** List of rooms with details like amenities, pricing, and photos.
 - **Room Details:** Detailed view of each room with booking options.
 - **Booking:** Room reservation process with confirmation.
 - **Contact Us:** User inquiries and feedback.
 - **Sign Up/Sign In:** Account creation and login functionality.
 - **Responsive Design:** Ensure the site is responsive across devices using CSS/Bootstrap.
 3. **CRUD Operations**
 - **Create:** Enable users to book rooms.
 - **Read:** Display available rooms and amenities.
 - **Update:** Allow users to modify reservation details before check-in.
 - **Delete:** Enable users to cancel room reservations as necessary.
-

Note: The listed requirements are mandatory, including room reservation management and validations wherever required. Extra marks will be awarded for any unique functionality added. Complete creative freedom is encouraged.
